

Q5 Unpacking Manual

Using a flat head screwdriver or a flat pry bar remove 8 metal clamps from crate.

Remove the door.

While one person steadies the speaker inside the box, 2 other people carefully slide the walls of the crate backwards and off of the base.

Remove the accessory kit from the top foam.

Remove the top foam from the speaker.

Disengage the brakes on the rear wheels.

Lay the door of the crate down so that the top edge hooks into the base and creates a ramp for the speaker to roll down.

Disengage the brakes on the rear wheels.

With one person on either side of the speaker, use small twisting movements to work the speaker towards the ramp (the side where the foam is beveled) until the speaker rolls off of the foam and slowly roll the speaker down the ramp.

Roll the speaker as close as possible to the final listening position.

Apply the rear brakes.

With two people tilt the speaker back and unscrew the front casters and lower the front of the speaker to the floor.

Tilt the speaker forward and remove the rear casters. Lower the back of the speaker to the floor.

Maneuver the speaker to their final listening position. Tilt backwards and then forwards to screw in the front and rear feet.

Adjust the depth of the foot thread until the speaker sits solidly and level.

Using wrench from accessory kit, tighten the top nut of the foot against the bottom plate.

Your speakers are now ready to hook up.
